Harrison S. Holt | (864)-437-3723 | hholt2901@gmail.com | https://harrisonholt.dev

Education & Certifications

B.S. Computer Science | Psychology Minor | Clemson University | Dec 2024
Full Stack Software Development Certificate | University of Texas at Austin | March 2026
Certs: AWS Certified Solutions Architect – Associate (SAA-C03), AWS Certified Developer – Associate (DVA-C02), DHS Trusted Tester, AWS Certified AI Practitioner (AIF-C01), AWS Certified Machine Learning Engineer – Associate (MLA-C01, Expected May 2026)

Technical Skills

Cloud: AWS (EC2, S3, RDS, Lambda, Cognito, Bedrock, SageMaker)
Languages: Python, JavaScript
Frameworks: React, Node.js, Django
Databases: MySQL, MongoDB

Experience

Jr. Software Developer Intern | Eigennet LLC | **Dec 2025 – Present (Expected Jun 2026)**

- Architected a high-performance olmOCR test pipeline on Amazon SageMaker, reducing PDF processing latency by 66% (90s to 30s) by optimizing vLLM inference scripts to maintain a warm server state.
- Designed and implemented automation scripts to download batch files from S3 to EC2, process outputs, and return structured results to S3.
- Troubleshot production EC2 issues by replicating environments in Amazon SageMaker to debug UI failures, Bedrock API errors, and infrastructure constraints.
- Collaborated with senior engineers during monthly on-site rotations in Rockville, MD to review architecture and cloud deployment strategies

Web Development Intern | Clemson University | Aug 2024 – Dec 2024

- Built and maintained pages in Cascade CMS using PHP, ensuring accessibility and consistent design.
- Partnered with designers and content teams to create 10+ student-facing pages.
- Improved WCAG compliance using semantic HTML, ARIA roles, and integrated analytics.

Projects

Good Driver Incentive Program (AWS Cloud-Based Rewards System**)**

- Developed a cloud-native rewards platform using AWS Lambda, API Gateway, Cognito, RDS (MySQL), SNS, and SES, enabling secure authentication and real-time transaction processing for 65 users.
- Investigated and resolved CloudFormation bootstrap stack failure that blocked Amplify deployment, restoring automated deployment pipeline functionality.
- Configured AWS RDS (MySQL) and optimized database queries for fast, real-time tracking of driver rewards and purchases. Monitored AWS Lambda performance with CloudWatch Logs and set up SNS notifications to alert users of account updates.

Chatterbox Messaging Application (Full Stack MERN App)

- Developed a full-stack MERN messaging platform supporting channel-based communication and authenticated user sessions.
- Built a responsive React interface using custom hooks, Axios, and Material UI for dynamic message updates
- Implemented JWT-based authentication, protected API routes, and channel-based message retrieval using Node.js, Express, and MongoDB.
