EDUCATION & CERTIFICATIONS

Georgia Institute of Technology | M.S. in Computer Science (Computing Systems) | *(Expected: Dec 2028)*
Clemson University | B.S. in Computer Science (Minor: Psychology) | *Graduated: Dec 2024*
AWS Certifications: Certified Solutions Architect – Associate (SAA), Certified Developer – Associate (DVA), Certified AI Practitioner (AIF)
Accessibility: Department of Homeland Security (DHS) Trusted Tester Certification (Digital Accessibility / WCAG compliance)

TECHNICAL SKILLS

Languages & Databases: Python, C, JavaScript, PHP, SQL, HTML5/CSS3 (Semantic HTML, ARIA), MongoDB, MySQL
Cloud & DevOps: AWS (EC2, S3, Lambda, API Gateway, CloudFormation, Cognito, RDS, CloudWatch, SNS, SES, Sagemaker), Git, Linux/SSH
Frameworks & Tools: React.js, Node.js, Express, MERN Stack, vLLM, Cascade CMS, Jira, Agile/Sprint Methodologies

PROFESSIONAL EXPERIENCE

Jr. Software Developer Intern | *Eigennet LLC* | Rockville, MD / Remote | *Dec 2025 – Mar 2026*
- Optimized an olmOCR document data pipeline on AWS, configuring vLLM inference scripts to maintain a warm server state and reducing processing latency by **66% (90s to 30s)** across **200+ continuous production workloads**.
- Designed automated Python scripts to orchestrate data payloads from Amazon S3 to EC2 GPU instances, streamlining structured outputs.
- Troubleshot production infrastructure constraints and VPC subnets by replicating environments in SageMaker to resolve Bedrock API rate limits, UI performance drops, and network routing timeouts.
- Collaborated with senior DevOps engineers during on-site rotations to review distributed systems architecture and code release pipelines.

Web Development Intern | *Clemson University* | Clemson, SC | *Aug 2024 – Dec 2024*
- Maintained university web platform nodes using Cascade CMS and PHP, ensuring responsive layout engineering and accessibility compliance.
- Partnered across cross-functional engineering teams to design, code, and deploy 10+ high-traffic, student-facing production pages.
- Audited digital platforms for strict WCAG 2.1 AA compliance using semantic HTML, ARIA roles, and user tracking telemetry.

TECHNICAL PROJECTS

Good Driver Incentive Program (AWS Cloud-Native Rewards Platform)
- Built a serverless backend architecture using AWS Lambda, API Gateway, Cognito, and RDS (MySQL) to handle secure user authentication, infrastructure observability logs via CloudWatch, and concurrent microtransaction routing for 65+ active instances.
- Debugged and resolved underlying CloudFormation bootstrap stack failures, successfully restoring automated CI/CD deployment pipelines.

Chatterbox Messaging Application (Full-Stack MERN Stack Deployment)
- Developed an asynchronous web messaging application supporting channel-based message streams, user session states, and token-based state distribution using React.js hooks, Node.js, Express routing engines, and MongoDB data storage nodes.
